

FREQUENTLY ASKED QUESTIONS
KAWASAKI 750 SXi DRY PIPE (FIN750SX03)

Q. Will this exhaust system work with my stock waterbox?

A. Yes. The Factory Pipe SXi dry pipe is designed to work with the stock box.

Q. Are any other modifications required to make the pipe work?

A. No. However, we do highly recommend aftermarket flame arrestors but they are not required.

Q. My pipe has black stuff leaking at the manifold/chamber connection.

A. There will be a small amount of leakage from this connection but this is normal. We supply a silicone sleeve to slide over the connection to help keep it from spraying inside the hull. If it is leaking exhaust at the connection then the O-rings are probably not seated correctly (see proper O-ring installation diagram in instructions).

Q. Do you have to cut the hood to make this pipe fit?

A. Yes, there is some minor cutting required on the underside of the hood. The instructions include digital images to help in this operation.

Q. Will this pipe work on a stock engine?

A. Yes, the dry pipe was designed and tested using a stock engine with aftermarket flame arrestors. It also works very well on modified and superstock setups.
